Description:

The 1.2 MW hydroelectric project was designed and started by others. Whitewater provided force account project management and construction supervision to complete the \$6,500,000 project in Cordova, Alaska.

The project features include a wood diversion dam, intake, 300' wood flume, 2500' of 42" diameter penstock, structural bridge, concrete and steel powerhouse, three turbine generators, switchgear and controls, operator's house, and 4 miles of undersea cable connecting the project to the local electric grid in Cordova.
